## User flow

The goal here is to show exactly where the new venue-switching behaviour enters the existing VOX journey. Rather than redesigning the entire booking flow, I'd introduce a recovery loop at the seat-selection stage, where the user has enough information to make an informed decision.

**Detailed User Flow :** [Click here]

## Wireframe

The redesign keeps the existing VOX visual language. The change is interaction-focused, not a complete visual redesign. Wireframes validate the flow and the venue-switching logic; final screens apply the VOX visual language to the validated flow

## Prototype Screens

The redesign connects movie discovery, cinema selection, showtime comparison, seat selection, food ordering, and payment into a consistent booking journey. Its central UX objective is to make cinema switching easier when seat availability is limited, while preserving relevant booking context and clearly communicating any changes to, showtimes, formats, or pricing.
